8.2 CAUTION: RISK OF STATIC ELECTRICITY

1. Handling of TYF LED SMD needs countermeasures against static electricity because this is a semiconductor product. Please take adequate measures to prevent any static electricity being produced such as the wearing of a wristband or anti-static gloves when handling this product. Every manufacturing facility in regard to the product (plant, equipment, machine, carrier machine and conveyance unit) should be connected to ground and please avoid the product to be electric-charged. ESD sensitivity of this product is 2000V (HBM, based on JEITA ED-4701/304). After assembling the LEDs into your final product(s), it is recommended to check whether the assembled LEDs are damaged by static electricity (electrical leak phenomenon) or not.

2. Unit chip voltage can no higher than 5 v, chip has positive and negative pad, the chip can not light up if weld wrong.

3. Power Supply Select: This product is powered by using a constant current driver, and the output current of the power range meets the requirement of specifications book, if use constant voltage source or other conditions, please do risk assessment.

8.3 Color difference matters needing attention

The different Bin led has different photoelectric data, before use, please assess carefully.

8.4 CAUTION: TEMPERATURE CONTROL

Suggested Temperature on $T_c < 85\text{ }^{\circ}\text{C}$ and phosphor Temperature on $T_c < 115\text{ }^{\circ}\text{C}$, if exceeded, customer needs to make reliability assessment.

8.5 CAUTION: CHEMICAL EXPOSURE HAZARD

Exposure to some chemicals commonly used in luminaire manufacturing and assembly can cause damage to the LED SMD. Please consult TYF Installation Instruction for additional information. If use the product in any of the below conditions, please confirm the reliability. Such as: wet, frost, salt air, corrosive gases (C_1 , H_2S , where NH_3 , SO_2 , NOX); Exposure under the sun, exposure outdoor, dusty. Water, oil, liquid medical and organic solvent.

8.6 CONTACT WITH LIGHT EMITTING SURFACE (LES)

Avoid any contact with the LES. Do not touch the LES of the LED SMD or apply stress to the LES (yellow phosphor resin area). Contact may cause damage to the LED SMD. Optics and reflectors must not be mounted in contact with the LES (yellow phosphor resin area). Optical devices may be mounted on the top surface of the plastic housing of the TYF LED SMD. If LED surface is dirty, please use alcohol to clean it. Please let it dry for 2 hours before using it. Acetone or corrosive is not acceptable.

8.7 STORAGE

Storage condition: Before opening, the storage temperature should be from $5 \sim 30\text{ }^{\circ}\text{C}$, relative humidity less than 60%. (After opening the bag, LED should be used within 24H.). For unused product, please do dehumidification, vacuum sealed. Dehumidifying conditions: $60\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$, 24H. Effective use for the sealed products is 3 months. If it is not used up in 24 hours after opening the package, the material should be dehumidified for 3 hours under at $60\text{ }^{\circ}\text{C} \pm 5\text{ }^{\circ}\text{C}$.

8.8 EYE SAFETY

Eye safety classification for the use of TYF LED SMDs is in accordance with specification IEC/TR 62778: Application of IEC 62471 for the assessment of blue light hazard to light sources and luminaires. We classify TYF LED at 450nm RG1.
